

LA RED

Cali, Colombia, April of 2003.

Dear
DesInventar User
Your City
Your Country

!!! NOW YOU HAVE DESINVENTAR 6.2 !!!

On behalf of LA RED and of its software development team, it is a pleasure to present the new version of the Disaster Inventory System, DesInventar, being used at the moment in several countries of Latin America and The Caribbean, in the State of Florida (USA) and in India, with growing diffusion expectations in more countries and continents. In this development phase we have had the support of the Project IAI - LA RED "Disaster Risk Management ENSO in Latin America."

LA RED and its development team for Desinventar have made an important effort to upgrade technologically and to improve the presentation and utilities of the DesInventar and DesConsultar modules, overcoming many of the small inconveniences of the versions that have been used up to now and at the same time, guaranteeing the integrity of the databases that all the users and investigators have been creating and analyzing in the last years.

We urge you to read and to put into practice the invitations of the enclosed messages and to participate with the same enthusiasm in the new activities that soon will be undertaken with the development team.

Cordial greeting,

Prof. **Andrés Velásquez**
DesInventar Coordination
